WHO WE ARE

The Energy Center is an independent nonprofit that seeks solutions to energy challenges. Our dedicated and talented staff includes analysts, architects, economists, engineers, evaluators, planners and communications professionals.

WHAT WE BELIEVE

Society's most pressing environmental problems are intimately linked to fossil energy use. A portfolio of solutions—from technologies and policies to community planning—is needed to reduce our fossil energy use and lower our carbon footprint. Efficient use of our energy resources is good for the environment, increases sustainability and builds a strong economy.

WHAT WE DO

The Energy Center provides objective research, information and education on energy issues to businesses, professionals, policymakers and the public. We apply our expertise to reducing the impact energy use has on the environment.

- Our technology and field research paves the way for new strategies to save energy.
- Our education programs help energy professionals keep current on industry trends and new technologies.
- We develop and execute programs that put energy efficiency and renewable energy technologies to work in homes and businesses.
- Our expertise in program evaluation and market research improves the design and delivery of energy efficiency and renewable energy programs.
- We initiate research and share information to help shape responsible policy decisions on energy and environmental issues.
- We connect the results of energy and environmental research to audiences who can put that information to work.

Our projects include:

- Award-winning program that reduces building energy use in commercial new construction.
- Field research showing how well residential high performance heating and air conditioning equipment works in real homes.
- Award-winning annual conference that draws more than 850 home builders and remodelers, who want to learn how to make homes energy efficient, renewable-ready and eco-friendly.
- Research that gives policymakers the information they need to determine the right amount to invest in energy-efficiency and renewable energy programs.
